Substation, Cabling, Earthing, Transformer, Cable Cleat, Power Plant, Steel Structure.

Registered with: Tenaga Nasional Berhad (TNB) and Ministry of Finance, CIDB, KTMB, Telekom, etc.

HIGH QUALITY PLASTIC SLABS / TILES (TRIPLE / SINGLE HOOK)

Introduction

Cable Slabs/Cover are used as visual warning indicators for cables laid underground, while at the same time provides mechanical protection for underground laid cables in the event of excavation work. The Cable Slab/Cover are buried below the ground level and above the underground cables.

Advantages

Very high impact strength properties to provides good mechanical protection for underground laid cables and pipes.

Very lightweight- reduce risk of personal injury.

Designed for easy transportation.

Designed with interlocking end (hook and slot) to make simple and effective connection at site.

Can be supplied in any colour and language, identifying the type of services buried below.

Prevent or minimise damages to Electrical Cables, Telecommunication Cables, Signalling Cables, Fibre Optic Cables, Gas Pipes, Water Pipes, etc.

High impact resistant

Reduce the cost for repairing

Accidental dropping does not damage cables

No risk of accidental breakages

Maintenance free

Gives the clearest warning

Environmental Friendly

Marking and Embossing

The slabs shall be embossed with lettering to provide visual warning during excavation works and permanently marked as per customer's requirements.

Note

Various feedback from sites and customers indicated that, conventional type single hook/slot interlocking slabs/covers easily disconnected/break from the next slab/cover due to only one single hook and slot system. Our Cable Slab is designed and improvised with 3 hooks/slots to withstand 3 times the pulling force and do not come off or break during excavation work or during installation.

6mm thick
(Triple Hook)
